

BRYCE MAO

San Francisco, CA 94122 - (415) 622-8128
bryce.mao1212@gmail.com – www.linkedin.com/in/bryce-mao

EDUCATION

B.S. in Computer Science / University of Hawaii at Manoa, Expected Graduation Date: December 2022

TECHNICAL SKILLS

HTML, Java, Javascript, C++, Eclipse, Unreal Engine 4, Android Studio, GitHub, Linux, Windows (XP – 10), Microsoft Office 2007+ (Access, Excel, OneNote, PowerPoint, Word)

WORK EXPERIENCE

Online Instructor / Tinkering School, Online 06/2020 – 08/2020

- Taught students to creatively use block-based coding using BBC:micro:bit, a pocket-sized codable computer with sensors for motion and direction, as well as Bluetooth
- Lead a group of 4 students at a time in successfully completing weekly projects

Summer Camp Counselor / Tinkering School, San Francisco, CA 06/2019 – 08/2019

- Taught 160 campers (roughly 25-28 new campers every week) to safely use different power tools for woodworking and lead them in fulfilling project goals
- Supervised campers and ensured safety and emergency procedures and guidelines are followed

Structural Engineer Intern / YouthWorks, San Francisco, CA 06/2017 – 08/2017

- Assisted with routine inspections of premises and equipment, with maintenance work such as changing filters in the HVAC system and replacing seals in plumbing systems, and with managing work orders and maintaining inventory

PROJECTS

Hexadecimal Sudoku Solver / Introduction to Computer Science I

Written in Java, this program is designed to solve 16x16 sudoku grids. For the puzzle to be considered solved, each row, column, and 4x4 grid must only contain one of each number (1-9) and letter (A-F). A recursive brute force method is used to try different possibilities and backtrack when errors arise.

Breach / Volunteer Project

Breach is a multiplayer first-person shooter (FPS)/Escape Game designed using C++ and Unreal Engine 4's blueprints and system. Contributed to back-end multiplayer development, debugging features, and quality assurance.

Pong MMO / Intro Android Mobile App Programming, MissionBit 2016

Developed an Android app that allows multiplayer to play pong through a Bluetooth connection and provides them with multilevel challenges. To make the game more challenging, the blockers are constantly moving in one direction and the player must tap their screen to switch directions.
