

BRYCE MAO

Louisville, KY 40241 · (415) 622-8128 · bryce.mao1212@gmail.com · github.com/brycemao123 · brycemaoportfolio.netlify.app/

PROFESSIONAL SUMMARY

Software engineer with a B.S. in Computer Science and 2+ years of hands-on experience developing scripts and automation tools, troubleshooting IoT-connected systems, and working across the full software-hardware stack. Proficient in C, Python, Java, and JavaScript with practical exposure to embedded systems, networked device diagnostics, and Agile development workflows. Passionate about building reliable software solutions and eager to contribute to connected appliance innovation in a rotational engineering development program.

TECHNICAL SKILLS

Languages: C, C++, C#, Python, Java, JavaScript, Ruby, HTML, SQL, MySQL, Lua

Software Engineering: Agile methodology (Gitlab), Git, GitHub, version control, scripting & automation, test-driven development (TDD), continuous integration, unit testing, Visual Studio Code, Eclipse, IntelliJ

Embedded & IoT: IoT device troubleshooting & diagnostics, PLC code troubleshooting, networked device integration, firmware/OS updates, device provisioning, network configuration

Platforms & Tools: Linux, Windows (XP–10), macOS, Splunk, Android Studio, Unity, Unreal Engine 4, React, MongoDB, Microsoft Office

WORK EXPERIENCE

Enterprise Technical Support Engineer / Packsize LLC,

Louisville, KY 10/2024 – Current

- Develop and maintain Python and SQL scripts to automate routine troubleshooting workflows, escalation procedures, and system diagnostics — reducing manual overhead and improving resolution consistency across the engineering team
- Troubleshoot and remediate IoT-connected devices and networked systems including smart hardware, switches, firewalls, and server integrations; diagnose low-level connectivity and configuration issues across heterogeneous device environments
- Troubleshoot PLC code and industrial control system logic to identify and resolve configuration issues affecting automated equipment operation and device communication
- Analyze ticket trends and system data to proactively identify recurring software and hardware issues; implement targeted solutions that improve system performance and reduce repeat incidents
- Collaborate cross-functionally with engineering, operations, and project teams to validate technical requirements, coordinate root cause analysis with third-party vendors, and deliver reliable solutions on schedule
- Manage anti-virus/malware remediation and compromised account recovery; support system reliability and uptime across customer environments

Technical Support Engineer / Packsize LLC,

Louisville, KY 10/2023 – 10/2024

- Supported software and hardware integration across networked systems and IoT-connected devices with a 97% resolution rate; built and maintained scripts for automated troubleshooting and escalation procedures
- Managed and maintained network configuration databases; developed reusable scripting solutions to streamline system diagnostics and reduce resolution time for recurring software-side issues
- Collaborated with engineering and operations teams to diagnose integration failures, validate system configurations, and ensure reliable performance across customer environments

IT Help Desk Intern / The Rawlings Group,

Louisville, KY 06/2022 – 08/2022

- Deployed and configured new hardware and software environments for onboarding employees; supported imaging, installation, and device configuration workflows while maintaining accurate inventory records

PROJECTS

Stability On the Rise / Hacking for Defence (H4D) Project

Applied software engineering and analytical methodologies within a multidisciplinary team to solve spin stabilization challenges during helicopter medevac operations. Contributed to research, prototyping, and validation of practical defense solutions using an Agile, iterative approach.

EDUCATION

B.S. in Computer Science / University of Hawaii at Manoa, May 2023

Google Cybersecurity Professional Certificate / July 2023
